# Paragon SL

The Paragon SL is an ultra-high-speed, straight-line quilter specifically made to produce single-line quilting at speed and productivity levels never available before. The Paragon SL will run at speeds of up to 1,750 rpm.

This is ideal for high-volume mattress producers creating channel-quilted panels. It's a streamlined machine using a single needle bar with 1-inch needle spacing. Only Gribe quality design and strength permits this type of machine to consistently crank out product at such extreme speeds.

## Specifications

**Max Speed** 1,750 rpm
